Supporting Solutions through Community

FARMING AND CONSERVATION TOGETHER

The Lakeshore Habitat Restoration Committee recognized a need to provide permanent protection to significant wetland/grassland habitat complexes developed in Northeast Manitowoc County through landowner participation in agricultural set-aside programs. It also wanted to expand habitat development into surrounding townships and encourage sustainable agriculture.

INRP awarded a grant to explore the opportunity to develop an organization in Northern Manitowoc and Southern Kewaunee counties modeled after Farming and Conservation Together (FACT), a Sauk County group. The grant will support an educational/outreach event to bring FACT representatives to the area to meet with local government officials, landowners, representatives of the nuclear power plants, and natural resource users.

MID PROJECT REPORT

Plans are underway for an evening workshop with the keynote speaker being the executive director of the Leopold Foundation. This foundation underwrites for another community group that has had success with the concept of farming and conservation together.

At a Glance...

Project:

To establish a collaborative farming/conservation group in Manitowoc and Kewaunee Counties.

Grant Recipient:

Lakeshore Habitat Restoration
Committee

MANITOWOC

Amount Awarded: \$600

Funding Cycle: 2004

The Lakeshore Habitat Restoration Committee will work to provide permanent protection to significant wetland/grassland habitat complexes.
